The invention relates to a variant dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding the CADE71463). DDAHs regulate the metabolism of ADMA (asymmetrical text) and the standard of ADMA (asymmetrical dimethyl-argining, a natuarly occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which has been implicated in susceptibility to diseases such as familial combined hyperlipidaemia, premature coronary artery disease (CAD), non combined hyperlipidaemia, premature coronary artery disease (CAD), non Thr. which is caused by a C to T change in exon 1 at a position or Thr. which is caused by a C to T change in exon 1 at a position or responding to base 260 in ADE71463 and ADE71465, Individuals heterocorresponding to base 260 in ADE71465 and adaptes in increased risk of developing cardiovascular diseases and diabetes. The invention also relates to a DDAH 1 cDNA capture probe; a method and kit for diagnosing a

complications of diabetes and diabetes in an individual by determining the DDAH I genotype, a method of treating diabetes or vascular complications of diabetes by enhancing nitric oxide availability, productions of diabetes and diabetes in a hypertensive treatment of cardiovascular disease and diabetes in a hypertensive batalability, production or concentration; a method of targeting completers intric oxide availability, production or metabolism; and a transgenic animal which carries a human variant DDAH; incleic acid sequence. The nucleic acid molecules and polypeptides are useful for treating cardiovascular disease, and hypertension), and diabetes and its vascular complications. The methods are useful for determining whether a patient will benefit from treatment with a drug which affects nitric oxide availability, production or metabolism; a drug which reduces ADMA availability or concentration; orn an agent which elevates DDAH arailability or concentration; orn an agent which elevates DDAH and also useful for determining whether a patient will be at risk of adverse effects if DDAH antagonists are administered. The present sequence or represents a nucleic acid encoding the "wild-type" (Thr87) DDAH I.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               683 CCAACAAAGGGCACGTCTTGCTGCACCGAACCCCGGAAGAGTATCCAGAAAGTGCAAAGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of a number of human shear stress response proteins. These are useful in the diagnosis, treatment and screening of vascular diseases caused by arteriosclerosis, including heart failure, post-PTCA restenosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ACGCGCTGAGAAGCGCCAAGGCGAGGAGGTGGACGTCGCCCGCGCGGAACGGCAGCACC

The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor seem cell differentiation into esteoblasts, or bone tissue deposition; (b) diagnosing abnormal costeoplasts or bone tissue abnormal rate of osteoplast formation or esteoporosis; or (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition.

Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, drugindred abnormalities in bone formation or bone loss, conditions that induced abnormalities in bone formation or bone loss, conditions that include abnormalities in bone formation or bone loss, conditions that included abnormalities in the present sequence is that of an osteoplast or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated cODN marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        442
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           502
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       464
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     322
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             644

Claim 1; SEQ ID NO 103; 458pp + Sequence Listing; English

The invention relates to a secretory polynucleotide (designated sptm) comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

c naturally occurring polynucleotide sequence at least 90 % identical to the polynucleotide sequence, a polynucleotide complementary to them or an RNA equivalent of them. The polypeptide or polynucleotide are useful for treating, preventing or diagnosing a disease or condition associated with the expression of functional SPPW. These are particularly useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's disease), neurological disorders (e.g. epilepsy, Huntingron's disease, multiple solerosis, cerebral palsy, Parkinson's disease, anxiety, cerebral palsy, Parkinson's disease, anxiety, solizophremia or ammesia), or cell proliferative disorders (e.g. psoriasis, polycythemia vera, or cancers including adenocarcinoma, leasest, cervix or prostate). Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences TTGGGTCTAGTGAATCTGCACAGAAGGCCCTTAAGATCATGCAACAGATGAGTGACCACC 622 682 742 142 202 278 cerrencareacedededededededededadedadededededededadadadadadadaga 338 CATTAGAAAAACTTCAGCTCAATATAGTAGAGATGAAAGATGAAAATGCAACTTTAGATG 382 458 98 GCTACGACAAACTCACTGTGCCTGATGACATAGCAGCAAACTGTATATATCTAAATATCC TTGGGTCTAGTGAATCTGCACAGAGGCCCTTAAGATCATGCAACAGATGAGTGACCACC CCGCCTTCGGCCGGCCACCCACGCCGTGGTGGGGGCGCTACCCGGAGTCGCTCTGCCAGC ACGCGCTGAGAAGCGCCAAGGGCGAGGAGGTGGACGTCGCCCGCGCGGAACGGCAGCACCC ACGAGAGCCTTCCGGACTGCGTCTTCGTGGAGGACGTGGCCGTGGTGTGCGAGGAGGACGG ACGAGACCTTCCGGACTGCGTCTTCGTGAGAGACGACGCCGTGGTGTGTCTCTGAGAGACGG CCCTCATCACCCGACCCGGGCCCGAGCCGGAGGAAGGAGGTTGACATGAAAGAAG GCGGGAGATGTTTATTCACAGGCAGAGAATTTTTTGTGGGCCTTTCCAAAAGGACAAATC 443 AACGAGGTGCTGAAATCTTGGCTGATACTTTTAAGGACTATGCAGTCTCCACAGTGCCAG TGGCAGATGGGTTGCATTTGAAGAGTTTCTGCAGCATGGCTGGGCCTAACCTGATCGCAA CCAACAAAGGGCACGTCTTGCTGCACCGGAACAGAGTATCCAGAAAGTGCAAAGG TIATGAGAAACTGAAGGACCATATGCTGATCCCCGTGAGGATGTCTGAACTGGAAAAGG Sequence 3932 BP; 1089 A; 883 C; 775 G; 1185 T; 0 U; 0 Other; Query Match 90.0%; Score 772; DB 7; Length 3932; Best Local Similarity 99.9%; Pred. ```
The invention relates to an isolated polypeptide comprising 12 fully defined sequences of 81-615 amino acids given in the specification, a naturally occurring amino acid sequence at least 90% identical to, having 81-599 amino acids, at least 93% identical to a sequence of 529 amino acids, or at least 97% identical to a sequence of 615 amino acids, or about a specification; or a biologically active or immunogenic fragment of the polypeptide. The polypeptides and polymucleotides are
                                                                                                                                                                                                                                                                                                        Anti-HIV; antiarteriosclerotic; dermatological; cytostatic; thyromimetic; osteopathic; thrombolytic; ophthalmological; antilipaemic; hepatchropic; antidiarthoeic; antilifammatory; virucide; immunogenic; autoimmune; drug metabolising enzyme; DME; inflammatory; AIDS; atherosclerosis; contact dermatitis; cell-proliferative; cancer; cirrhosis; dwarfism; developmental; hypothyroidism; endocrine; osteoporosis; thrombools; diabetes; glaucoma; keratitis; metabolic; hyperlipidaemia; diarrhoea; cystic fibrosis; gastrointeefinal; gastroenteritis; liver; hepatitis; Reye's syndrome; exogenous compound; gene therapy; enzyme; human; gene;

useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of a drug metabolising enzyme (DME), such as autoimmunot/inflammatory (e.g. AIDS, atheroscierosis, contact dermatitis) cell-proliferative (e.g. cancer, cirrhosis), developmental (e.g. dwarfism, hypothyroidism), endocrine (e.g. oxteoporosis, thrombosis, diabtes), ewe (e.g. glaucoma, cartitis), metabolic (e.g. hyperlipidaemia, cystic fibrosis), gastrointestinal (e.g. gastroenteritis, diarrhoea), or liver (e.g. the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of pNE. The DME or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polympetide, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polympetide. The microarray is useful in monitoring or measuring protein-profiles. The polymucleotides of the invention can be used in gene therapy. This polymucleotide sequence represents the DNA encoding a drug metabolising enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1109

The invention relates to a variant dimethylarginine dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding it (ADE71463). DDAHS regulate the metabolism of ADMA (asymmetrical dimethyl-arginine; a natuarily occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which has been implicated in susceptibility to disease such as familial combined hyperlipidaemia, premature coronary artery disease (CAD), non fine linelin-dependent (type.2) diabetes mellitus, and diaerolic hypertension. The variant DDAH 1 of the invention has Met at position 87, rather than Thr, which is caused by a C to T change in exon 1 at a position

Claim 4; SEQ ID NO 1; 37pp; English.

corresponding to base 260 in ADE71463 and ADE71465. Individuals heterocre developing cardiovascular diseases and diabetes. The invention also relates to a DDAH in CDNA capture probe; a method and kit for diagnosing a susceptibility to a cardiovascular disease and diabetes in an individual by determining the DDAH in genotype, a method and kit for diagnosing a susceptibility, to a cardiovascular disease and diabetes in an individual vascular complications of diabetes by enhancing nitric oxide availability, production or concentration; a method of targeting cardiovascular disease and diabetes in a hypertensive patient by determining the DDAH in genotype and treating them with a drug that affects nitric oxide availability, production or metabolism, and sequence. The nucleic acid molecules and polypeptides are useful for treating cardiovascular disease (e.g., coronary heart disease, and its vascular complications. The methods are useful for determining whether a patient will benefit from treatment with a drug which affects nitric oxide availability or concentration, orn an agent which elevates DDAH availability or concentration; orn an agent which elevates DDAH availability or concentration (such as DDAH agonist). The methods are telected if DDAH antagonists are administered. The present sequence represents a specifically claimed nucleic acid encoding the variant (Met87) DDAH 1. 322 142 202 202 262 442 383 GCGGAGATGTTTTATTCACAGGCAGAGAATTTTTTGTGGGCCTTTCCAAAAGGACAAATC 442 502 562 262 322 CATTAGAAAAACTTCAGCTCAATATAGTAGAGATGAAAGATGAAAATGCAACTTTAGATG 382 323 CÁTTÁGAAAAÁCTTCAGCTCAATATAGTÁGAGATGAAÁGATGAAAATGCAACTTTAGATG 382 AACGAGGTGCTGAAATCTTGGCTGATACTTTTAAGGACTATGCAGTCTCCACAGTGCCAG 502 562 622 622 682 82 443 AACGAGGTGCTGAAATCTTGGGCTGATACTTTTAAGGACTATGCAGTCTCCACAGTGCCAG 143 AGCTCTACGTGGGCGTGCTGGGCAGCAAGCTGGGGCTGCAGGTGGTGGAGCTGCGGCCG 203 ACGAGAGCCTTCCGGACTGCGTCTTCGTGGAGGACGTGGCCGTGGTGTGCGAGGACGG TGGCAGATGGGTTGCATTTGAAGAGTTTCTGCAGCATGGCTGGGCCTAACCTGATCGCAA 503 TGGCAGATGGGTTGCATTTGAAGAGTTTCTGCAGCATGGCTGGGCCTAACCTGATCGCAA GCTACGACAAACTCACTGTGCCTGATGACATAGCAGCAAACTGTATATATCTTAAATATCC 23 CCGCCTTCGGCCGGGCCACCCACGCCGTGGTGCGGGGCGCTACCCGGAGTCGCTCTGCCAGC 23 CCGCCTTCGGCCGGGCCACCCACCCAGGCGGGGGGGCGTACCCGAGTCGCTCGGCCAGC GCGGAGATGTTTATTCACAGGCAGAGAATTTTTGTGGGCCTTTCCAAAAGGACAAATC TTGGGTCTAGTGAATCTGCACAGAAGCCCTTAAGATCATGCAACAGATGAGCGACCACC 563 TTGGGTCTAGTGAATCTGCACAGAAGGCCCTTAAGATCATGCAAAGATGAGTGACGACC Gaps .. 0 Score 721; DB 9; Length 858; Pred. AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB55631 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, imphrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polymucleotides may be used for detection of prostate cancer, chromosome infentification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, agastrointestinal, pulmonary, cardiovascular, reproductive, disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gone therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease; ss.

New combination comprising cDNAs that are differentially expressed prostate cancer, useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. Claim 1; SEQ ID NO 328; 42pp; English. Faris M, Pearson CI; (PEAR/) PEARSON C I. WPI; 2003-831619/77.

The invention relates to a combination comprising a number of cDNAs detecting differential expression of one or more cDNAs in a sample containing differential expression of one or more cDNAs in a sample containing nucleic acids by hybridising a substrate with the mucleic acids by hybridisation as experts with the mucleic hybridisation complexes, detecting hybridisation complexes, detecting hybridisation complexes, formation and comparing the complexes formed with standard complexes, where differences between the standard and the sample complex formation indicate differential expression of cDNAs in the sample. The differential expression is diagnostic of prostate cancer. The invention also relates to proteans and antibodies related to the cDNAs. The combination is useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. The antibodies are useful for detecting prostate cancer. The antibodies are useful for detecting prostate cancer. The antibodies are useful for detecting prostate cancer. This sequence represents a human prostate cancer cDNA of the invention.

Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation process

Claim 1; SEQ ID NO 8; 78pp + Sequence Listing; English

The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition, (b) diagnosing abnormal costeoplasts, or bone tissue abnormal rate of osteoplast formation or osteoporosis, or c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postumenosmal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteoporosis, osteoporosis, osteoporosis, osteoporosis, osteoporosis, osteoporosis, induced abnormalities in bone formation or bone loss, conditions that invoced abnormalities in bone formation or bone loss, conditions that or include disease linked to breast cancer, mastecoytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated CONN marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wince introduced by the printed of the prin

ABA14641

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM

WPI; 2001-541565/60.

Nucleic acids encoding 1224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.

Disclosure, SEQ ID NO 6973; 1701pp + Sequence Listing; English.

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB18678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and owner and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune of disorders e.g. Addison's diabetes mellitus, Crohn's disease, multiple sclerosis, theumatoid arthritis and ulcerative colitis; (c) anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, theumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly will but will be considered because the printed specification, but was obtained in electronic format directly

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating confidence and confidence are specification.

(ABB14678-ABB18001) useful for preventing, treating or ameliorating confidence are confidence are specification.

(ABB14678-ABB18001) useful for prevention or specification.

(ABB14678-ABB18001) useful for prevention or specification.

(ABB14678-ABB18001) useful for prevention of the specification.

(ABB14678-ABB18001) useful protein of the specification of the specification.

(ABB14678-ABB18001) useful is the specification.

(ABB14678-ABB18001) useful protein or part of the printed specification, but was obtained in electronic format directly confirmat wirely but but by the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         690 AGGGCACGTCTTGCTGCACCGCAACCCCGGAAGÀGTATCCAGAAAGTGCAAAGGT 743

```
The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          302 AGGTTGACATGATGAAGAAGCATTAGAAAACTTCAGCTCAATATAGTAGAGATGAAAG 361
                                                                                                                                                                                                                                                                                                            New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human spliced transcript detection oligonucleotide SEQ ID NO:9030.

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcription unit of the genome, which encodes one or more messenger RNAs splice variants. The colligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or cuantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini collipraries to detect transcripts of a sub-transcriptome under a particular libraries to detect transcripts of a sub-transcriptome under a particular collipracial specific genes; and to detect RNA transcriptom of the specific tissue under a specific pathological condition; to detect to specific genes; and to detect RNA transcripts of a transcriptome of a pathological condition; to detect Rna disorder. ABN27253 to ABNS9589 represent oligonucleotide sequences from the printed specification, but was obtained in electronic format directly from WIPO at ftp. Wibo.int/Dub/bublished_pot_sequences

Orr M;

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Nucleotides encoding methylarginase polypeptides, vectors comprising these mucleotides and the polypeptides themselves can be used in medicaments for the treatment of hyperlipidemia, renal failure, hypertension, restenosis after angioplasty, atherosclerosis, complications of heart failure, schizophrenia, multiple sclerosis or cancer. Modulators of the enzyme can be used in medicaments for the treatment of ischemia-reperfusion injury of the brain or heart, cancer, lethal hypertension in severe inflammatory conditions such as septic shock or multi-organ failure, or local and systemic inflammatory disorders including arthritis, skin disorders, inflammatory cardiac disease, migraine, or microbial or bacterial infection Novel methylarginase polypeptides and polynucleotides, used to identify modulators of them, which are used in the treatment of e.g. cancer, hypertension, and bacterial infections. Disclosure; SEQ ID NO 3; 37pp; English.

The invention relates to a variant dimethylarginine dimethylarginine dimethylarginal conference (IDDAH 1; ADE7164) and a nucleic acid encoding it (ADE71463). DDAHS regulate the metabolism of ADMA (asymetrical dimethylaraninohydrolase-I (IDDAH) is ADE71464) and a nucleic acid encoding it (ADE71463). DDAHS regulate the metabolism of ADMA (asymetrical dimethylarginine; a natuarily occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders auch as cardiovascular clisease and diabetes. The DDMH I gene is located on chromosome 1, which has been implicated in susceptibility to diseases such as familial. Which has been implicated in susceptibility and diastolic hypertension. The variant DDMH of the invention has Met at position 87, rather than Thr, which is caused by a C to T change in exon 1 at a position or responding to base 500 in ADE71463 and ADE71465. Individuals heterotor homosyque for the Thre87Met allele have an increased risk of developing cardiovascular diseases and diabetes. The invention also relates to a DDMH 1 cDNA capture probe; a method and kit for diagnosing a susceptibility to a cardiovascular disease and diabetes in an individual by determining the DDMH 1 genotype and treating diabetes or caption to cardiovascular disease and diabetes in an individual cycleration or concentration; a method of targeting treatment of cardiovascular disease and diabetes in a hypertensive treatment of cardiovascular disease and diabetes in a hypertensive complications. The method arries a human variant DDMH 1 mucleic acid molecules and polypeptides are useful for treating cardiovascular disease a human variant DDMH 1 mucleic acid molecules concentration or metabolism, and diabetes and its vascular complications. The methods are useful for determining whether a patient will benefit from treatment with a drug which elevates DDMH availability production or metabolism, and diabetes and its vascular complications. The method are useful for determining the publication or metabolism, and diabe

Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation process.

Claim 1; SEQ ID NO 9; 78pp + Sequence Listing; English

The invention relates to genes and their expression profiles are used for: (a) screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition; (b) diagnosing abnormal deposition of bone tissue, abnormal rate of osteoblast formation or osteoporosis; or (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postumenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, druginduced abnormalities in bone formation or bone loss, conditions that induced abnormalities in bone formation or bone loss, conditions that induced abnormalities in bone formation or bone loss, conditions skeletal disease linked to breast cancer, mastcoyrosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast of differentiation associated cDNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wippo.int/pub/published\_pot\_sequences

New human secretory proteins and polynucleotides, useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. Alzheimer's), or cell proliferations or cancers.

Claim 1; SEQ ID NO 103; 458pp + Sequence Listing; English.

The invention relates to a secretory polynucleotide (designated sptm)

comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

naturally occurring polynucleotide sequence at least 90 % identical to

the polynucleotide sequence, a polynucleotide complementary to them or an

ENA equivalent of them. The polynucleotide complementary to them or an

ENA equivalent of them. The polynucleotide are useful for

treating, preventing or diagnosing a disease or condition associated with

the expression of functional SPTM. These are particularly useful for

diagnosing, treating or preventing autoimmune/inflammatory disorders

(e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's

disease), neurological disorders (e.g. epilepsy, Huntington's disease,

cerebral palsy, Parkinson's disease,

multiple solerosis, cerebral palsy, Parkinson's disease,

multiple solerosis, cerebral palsy, Parkinson's disease,

solizophrenia or amnesia), or cell proliferative disorders (e.g.

psoriasis, polycythemia vera, or cell proliferative disorders of the brain,

leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,

leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,

or form part of the printed specification, but was obtained in electronic

commat directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14-FEB-2002;
                                                                                                                                                                                                                                                                                                             sapiens
```

The invention relates to an isolated polypeptide comprising 12 fully defined sequences of 81-615 amino acids given in the specification; a caturally occurring amino acids gequence at least 90% identical to, having 81-599 amino acids, at least 93% identical to, having acids, or at least 93% identical a sequence of 529 amino acids, at least 93% identical to a sequence of 529 amino acids, at least 93% identical to a sequence of 529 amino acids, or at least 93% identical to a sequence of 529 amino acids, and for severation and sequence of 615 amino acids, all carriers or immunogenic constitutions associated with the decreased expression or overexpression of a drug metabolising enzyme (DME), such as autoimmuno/inflammatory (e.g. albs, contact dermatitis) cell-proliferative (e.g. cancer, cirrhosis), developmental (e.g. dwarfism, hypothyroidism), endocrine (e.g. hyperlipidaemia, cystic fibrosis), contact dermatitis, hypothyroidism), endocrine (e.g. hyperlipidaemia, cystic fibrosis), contact dermatitis, diabetes), eve (e.g. glaucoma, cheatitis), metabolic (e.g. hyperlipidaemia, cystic fibrosis), contact dermatitis, diabetes (e.g. pupperlitis, Reye s syndrome) disorders. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and compounds that specifically bind to or modulate the activity of the polympetides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polympetides. The polymucleotides of the invention can be used in gene protein interactions, drug-target interactions, and gene expression cyprotiiles. The polymucleotides of the invention can be used in gene therapy. This polymucleotide sequence represents the polymucleotide sequence represents the bund in a drug New drug metabolizing enzymes (DME) useful for diagnosing, treating preventing diseases or conditions associated with aberrant DME expression, e.g. cancer, AIDS, atherosclerosis, diabetes, glaucoma, hepatitis, osteoporosis. Claim 5; Page 164-165; 166pp; English.
